SUMMARY

Computer Science graduate and full-stack developer with internship experience across software development, QA automation, and data engineering. Built HRIS modules in TypeScript for a 200+ employee organization, automated regression testing with Playwright, and delivered AWS and Google Cloud data pipelines for real business clients.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL

Frameworks: React, Node.js, Express, FastAPI, Three.js, PySimpleGUI, REST APIs, JWT / RBAC

Data & Cloud: PostgreSQL, BigQuery, AWS (Lambda, S3, Redshift, EC2), GCP (Cloud Run, Scheduler), Apps Script, Power BI, Looker Studio

Testing & Tools: Playwright, Docker, nginx, Git

WORK EXPERIENCE

Appraiser & Data Systems Developer
Aug 2026 – Present

SMSP Gadget Phoneshop

- Built an automated reporting and analytics platform for sister branch Lesaka Trading (completed Sep 2026), replacing the daily financial statements, monthly reconciliation, and payroll a manager typed by hand.
- Consolidated spreadsheets from 8 accounts (management + 7 branches) through the Google Sheets API and Apps Script into a BigQuery warehouse with Python ingestion, validation, and KPI aggregation.
- Added data-quality checks, anomaly detection, and Gemini-generated insights feeding Looker Studio dashboards; deployed on Cloud Run with Cloud Scheduler for hands-off scheduled runs.

Software Developer Intern
Apr 2026 – Jul 2026

Highly Succeed Inc. — Mandaluyong City, PH

- Built three core HRIS modules in TypeScript for a 200+ employee organization: the HR database schema, Time and Attendance, and HR Analytics dashboards, owning each from schema design to UI.
- Secured API endpoints with JWT authentication and role-based access control for employee data.
- Wrote 25+ Playwright test cases and ran manual and regression test cycles across the HRIS, the 3rd Fitness gym app, and a hospital management system.
- Automated the hospital system's appointment-module tests, cutting a 12-case run from 25 to 2 minutes (~92% faster).
- Co-built a full-stack content management system with an intern team, ingesting data from a public game-data REST API into PostgreSQL and serving it to a React frontend.

Data Engineer Intern
Dec 2025 – Mar 2026

OGIS Philippines Inc. — Makati City, PH

- Designed and delivered an end-to-end AWS ETL pipeline (Lambda, S3, Redshift, EC2) as my main internship deliverable, and contributed features and fixes to two client data pipelines.
- Built two Power BI dashboards, one per client, for stakeholder reporting.
- Consolidated multiple separate SQL queries into single JOIN-based queries returning compact, report-ready data, and validated datasets before they reached stakeholders.

Freelance Full-Stack Developer
Nov 2025

Femy's Resort

- Built a full-stack reservation platform (Node.js, Express, PostgreSQL, React) with separate customer and admin interfaces and role-based access separating bookings from administration.
- Developed an interactive Three.js 3D virtual tour that lets guests explore the property before booking.

PROJECTS

Cryptocurrency Investment Risk Assessment System
Python · TensorFlow · scikit-learn

University thesis (team project)

- Co-developed a system that ingests live market data from the CoinGecko and CoinMarketCap APIs to score investment risk and estimate hypothetical profitability across coins.
- Implemented ML models in TensorFlow and scikit-learn, with a pipeline validating incoming data before analysis.
- Built the PySimpleGUI desktop app with automated tests and audit logging, packaged as a standalone Windows executable.

EDUCATION

Bachelor of Science in Computer Science · *Far Eastern University Alabang, Muntinlupa City* — Graduated Sep 2026

CERTIFICATIONS

Information Technology Specialist – Python, Certiport — Jun 2024

Information Technology Specialist – Java, Certiport — Nov 2023

CS50x: Introduction to Computer Science, HarvardX / edX — Dec 2022
